SUMMARY

Backend engineer who built into platform work — owns systems end-to-end across NestJS / TypeScript backends and an AWS platform on EKS. Built the production platform for a drug-testing platform serving hospitals and clinics from zero, including the Firebase → AWS replatform that took the product to launch.

EXPERIENCE

Software Engineer, DevOps · Sample Assist

Wollongong, NSW · Oct 2023 — Present

Drug-testing platform for hospitals and clinics; handles My Health Records Act-regulated data including Individual Healthcare Identifiers (IHIs). Live in production with hundreds of users across 5–20 customer clinics.

- Led the Firebase + Google Cloud Functions → AWS replatform pre-launch in ~3 months with one other engineer: 100+ tables Firestore → RDS Postgres, Cloud Functions → containerised NestJS services on EKS, Firebase Auth → custom in-house auth, Firebase Storage → S3. Used dual-writes to validate parity before each cutover.
- Built the production AWS platform from zero in Terraform — VPC, EKS, RDS, ElastiCache, IAM, Secrets Manager — across staging and prod.
- Built the backend in NestJS / TypeScript across 20+ services on TypeORM + Postgres, with shared modules for auth, data access, and observability.
- Built a custom in-house auth service providing cross-product SSO across the 7-app suite (4 mobile + 3 web), with email/password, Google, and Apple sign-in, short-lived access + refresh tokens, and JWT verification on each downstream backend.
- Stood up a GitOps pipeline: GitHub Actions → ECR → Argo CD + Helm for 20+ services, with isolated staging/prod and a repeatable promotion path.
- Built the mobile release pipeline for all 4 mobile apps on iOS and Android — Fastlane (with Match for iOS signing) triggered from GitHub Actions on tag, releasing to TestFlight and Play internal track.
- Cut AWS spend ~30% via EKS node right-sizing, dev/staging off-hours scale-down, and VPC endpoints to reduce NAT gateway traffic.
- Set up Prometheus + Grafana from scratch, plus alerting and on-call rotation.
- Aligned the platform to Australian Privacy Act (APPs) and the My Health Records Act — AWS Sydney for data residency, encryption at rest and in transit, IAM least-privilege in Terraform, RBAC at the app layer. Passed an external penetration test.
- Mentor 3 engineers on backend and platform; set NestJS, Terraform, and Helm standards across the team.

Backend Engineer · GGJungle VN

Ho Chi Minh City, Vietnam · Mar 2022 — Jun 2023

Vietnam office of a Japanese company; backend engineer on a Japanese e-commerce platform that later expanded into Southeast Asia.

- NestJS / Node.js / TypeScript against MySQL on an existing service-oriented backend; contributed across order/checkout flows, admin tooling, and ongoing data-model evolution for 15 months.
- Owned the VNPAY integration end-to-end (~1–2 months with a frontend dev) when the product expanded into Vietnam — hosted-page redirect flow with webhook callbacks, plumbed into the existing checkout and sandbox-tested before live.
- Designed and built a new Coupon module from scratch (~1 month): database schema, NestJS service, and integration into the existing cart/checkout. Supported percentage and fixed-amount discounts, free shipping, expiry, and per-user usage limits.

- Worked inside Japanese-organisation engineering process — detailed specs, careful code review, and heavier documentation standards than I had previously worked to.

Software Engineer · FPT Tan Thuan Telecom

Ho Chi Minh City, Vietnam · Apr 2021 — Feb 2022

- First professional engineering role out of university. Junior engineer on a team of ~8 building internal IT systems for FPT staff — admin panels, dashboards, and Express APIs against MongoDB.
- Owned an admin-tool automation that replaced a recurring manual task an internal staff member had been doing on a daily/weekly cadence — one of the first features I owned end-to-end.
- Worked directly with internal staff users: sat with them to understand the manual process before building, then demoed back and iterated.

SKILLS

Cloud & Platform: AWS (EKS, ECS Fargate, RDS, ElastiCache, ALB, Route 53, S3, VPC, IAM, Secrets Manager), Terraform, Helm, Argo CD

CI/CD: GitHub Actions, Argo CD, GitOps, Fastlane (with Match) for iOS & Android

Backend: NestJS, TypeScript, Node.js, Express, TypeORM, REST APIs, JWT / OAuth2 (Google, Apple Sign-in)

Data: PostgreSQL, MySQL, MongoDB, Redis (ElastiCache)

Observability: Prometheus, Grafana, structured logging, on-call response

Security & Compliance: IAM least-privilege, AWS Secrets Manager, encryption at rest/in transit; alignment with Australian Privacy Act (APPs) & My Health Records Act; external penetration test

Other: Docker, Bash, AI-assisted development (Claude Code)

EDUCATION

Master of Computer Science · University of Wollongong

Wollongong, NSW · Jul 2023 — Jul 2025

Bachelor of Science, Computer Science · Vietnam National University — UIT

Ho Chi Minh City · Sep 2016 — Sep 2020

SIDE PROJECTS

Startiny — to-do app on the iOS App Store; shipped solo in ~2 weeks of AI-assisted development (React Native + Expo, Swift bridges, Claude Code for the bulk of the code). Live on the App Store; active development paused.
