SUMMARY

DevOps engineer with 5+ years building and operating production cloud infrastructure on AWS — including hands-on Kubernetes (EKS), GitOps with Argo CD, Helm-based deployments, CI/CD pipeline design, and observability with Prometheus and Grafana. Comfortable troubleshooting across Linux, containers, networking, and distributed systems, and used to working directly with stakeholders to deliver and improve production environments.

TECHNICAL SKILLS

Cloud: AWS (EKS, ECS, Fargate, EC2, ALB, Route 53, S3, VPC, IAM, RDS, ElastiCache), GCP

Kubernetes & Containers: Amazon EKS (production), kubectl, Helm, ingress controllers, Docker, container orchestration, troubleshooting pods and workloads

Infrastructure as Code: Terraform (extensive, production), CloudFormation (familiar)

CI/CD: GitHub Actions, Argo CD GitOps workflows, automated multi-environment deployments

Monitoring & Observability: Prometheus, Grafana (dashboards & alerts), AWS CloudWatch, structured logging, on-call incident response

Cloud Security: IAM least-privilege, AWS Security Hub, GuardDuty, Inspector, secrets management

Scripting: Bash, Python

Troubleshooting: Linux, containers, networking, distributed systems

EXPERIENCE

Software Engineer, DevOps

Sample Assist

Oct 2023 – Present

Wollongong, NSW

- Operate production workloads on Amazon EKS — author and manage Deployments, Services, Ingress, and Helm charts; day-to-day kubectl operations including debugging pods, rolling deploys, and event/log triage during incidents.
- Deploy and operate the platform using GitOps workflows — declarative manifests in Git, automated reconciliation via Argo CD, removing direct cluster mutation and giving the team an auditable, repeatable deployment model.
- Designed and provisioned the production AWS stack as Infrastructure-as-Code with Terraform — EKS, RDS, ElastiCache, ALB, Route 53, VPC, IAM — across multiple environments aligned with security best practice.
- Built observability across the platform with Prometheus and Grafana — service dashboards, alerting rules, and on-call runbooks — alongside CloudWatch for AWS-native metrics and logs.
- Designed and maintain CI/CD pipelines in GitHub Actions for backend services and Flutter mobile apps, taking releases from manual multi-hour processes to one-click automated deploys.
- Established cloud security practices: IAM least-privilege design, AWS Security Hub and GuardDuty monitoring, and Inspector for workload scanning.
- Lead technical direction for a team of five engineers — architecture decisions, deployment standards, code review practices, and the rollout of AI-assisted development tooling (Cursor, Claude Code, GitHub Copilot).
- Engage cross-functionally with engineering, product, and business stakeholders on infrastructure roadmap and tooling decisions; maintain documentation of the platform, deployment procedures, and runbooks.
- Migrated 100+ tables from Firebase to Amazon RDS (PostgreSQL) with zero production downtime as part of the broader platform modernisation.

Backend / Cloud Engineer

GGJungle VN Co., Ltd

Mar 2022 – Jun 2023

Ho Chi Minh City, Vietnam

- Operated AWS infrastructure (EC2, CloudFront, SNS) for production workloads and customised Docker configurations to improve deployment reliability and reduce release time.
- Optimised legacy MySQL databases — query tuning, indexing, integrity — and introduced backup and disaster-recovery procedures that hadn't previously existed.
- Worked directly with Japanese enterprise customers on requirements gathering, technical delivery, and incident resolution — early customer-facing technical experience.
- Built and maintained Node.js / NestJS APIs powering customer-facing products; integrated third-party services (VNPAY payments).

Software Engineer

FPT Tan Thuan Telecom Co., Ltd

Apr 2021 – Feb 2022

Ho Chi Minh City, Vietnam

- Delivered backend and tooling work within a large enterprise IT services environment, working alongside cross-functional teams under formal delivery and review processes.

SIDE PROJECT

[Startiny — iOS Productivity App](#)

May 2026 – Present

Solo-built and shipped to the App Store in 2 weeks

- Designed, built, and launched a productivity app on the App Store solo — full ownership across product, design, and release engineering.

EDUCATION

Master of Computer Science

University of Wollongong

Jul 2023 – Jul 2025

Wollongong, NSW

Bachelor of Science, Computer Science

Vietnam National University — UIT

Sep 2016 – Sep 2020

Ho Chi Minh City, Vietnam
